

Program Performance Report

Residential Substance Abuse Treatment (RSAT) Program

January–June 2013

This report was prepared by Jimmy Steyee, CSR, Incorporated under contract #GS-10F-0114L from the Bureau of Justice Assistance.

Residential Substance Abuse Treatment (RSAT) Program: January–June 2013

Program Performance Report

The Residential Substance Abuse Treatment (RSAT) program, administered through the Bureau of Justice Assistance (BJA), was created to help States and units of local government develop, implement, and improve treatment programs in State and local correctional and detention facilities. It also helps them create and maintain community-based aftercare services for probationers and parolees. Prison- and jail-based (residential) programs provide services to offenders before their release. In these programs, offenders are usually housed apart from the general population. Aftercare programs are provided in community settings after offenders have been released. RSAT programs provide substance abuse treatment and other services such as housing, education, and vocational assistance.

RSAT grants are awarded to all 50 States, the District of Columbia, and the 5 U.S. Territories—American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands (collectively referred to as States). States may use RSAT grant funds to support three types of programs: State and local correctional facility RSAT programs (prison-based), jail-based treatment programs, and aftercare programs. State grantees typically subaward funds to State and local correctional facilities and treatment programs. Grantees are responsible for ensuring subrecipients enter performance data into the Performance Measurement Tool (PMT).

This Program Performance Report (PPR) is divided into two sections: (1) jail- and prison-based programs, and (2) aftercare programs. It should be noted that state-based correctional facilities (with a small number of juvenile correctional facilities) are included in the prison-based data section.¹ The following is based on self-reported data from grantees and subrecipients for the January–March 2013 and April–June 2013 quarters that had active awards. Table 1 shows the number of awards and subrecipient awards and the PMT completion rate by quarter.

Table 1. Jail-Based, Prison-Based, and Aftercare Awards and Subawards: January–June 2013

		Awards (N)	Completed PMT Reports (N)	Completion Rate (%)
State Awards	January–March 2013	231	173	75%
	April–June 2013	215	188	87
Subawards	January–March 2013	191	162	85
	April–June 2013	186	184	99

- The reporting completion rate ranged from 75 percent for State awards during the January–March 2013 quarter to 99 percent for subrecipients during the April–June 2013 quarter.

Not all grantees and subrecipients were operational during the reporting period. Programs may not be operational for many reasons, including administrative issues, a lack of program participants, a grantee/subrecipient that is not yet spending funds, or an award that is closing out. Table 2 shows the number of operational programs by program type. An operational program means that grantees executed program activities outlined in their application and spent award funds during the quarter(s) for which they are reporting. Awards are made in the fiscal year of the appropriation and may be expended during the following 3 to 4 years.

¹ Grantees and subrecipients self-select their program type, which occasionally results in a program that is incorrectly classified. An example is a large county jail that reports data on the prison-based program questions. BJA is working with grantees to improve reporting. Future reports will reflect these changes.

Table 2. Jail-Based, Prison-Based, and Aftercare Operational Programs: January–June 2013

Quarter	Jail-Based	Prison-Based	Aftercare	Total
January–March 2013	47	65	32	144
April–June 2013	46	66	26	138

- Overall, there are more operational prison-based programs than jail-based and aftercare programs.
- Programs were operational in 52 States and Territories (not shown in Table 2).

Participant-Level Key Measures for Jail- and Prison-Based Programs

This section represents those programs that were operational and using BJA RSAT funds in January–June 2013 and may not be representative of all prison- and jail-based RSAT programs (see Figures 1–6 and Tables 3 and 4).

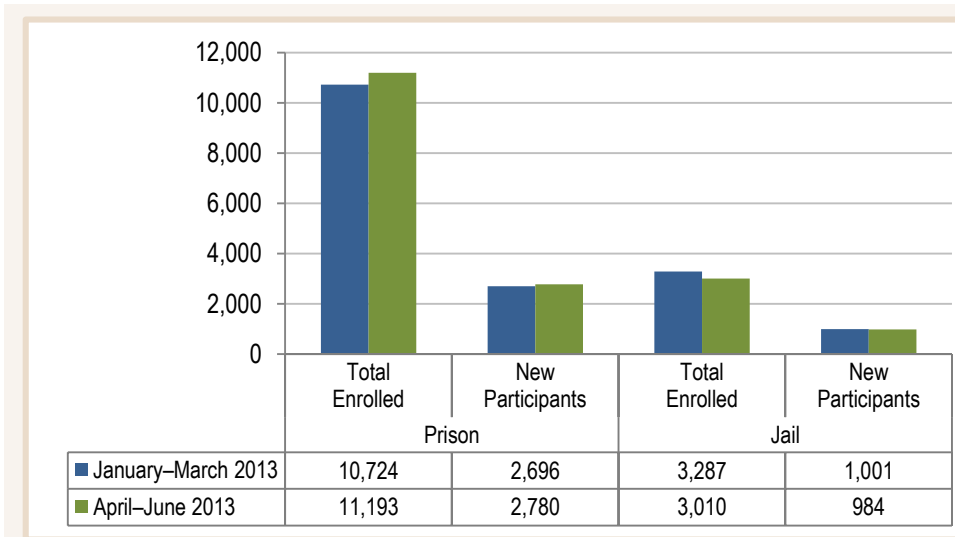

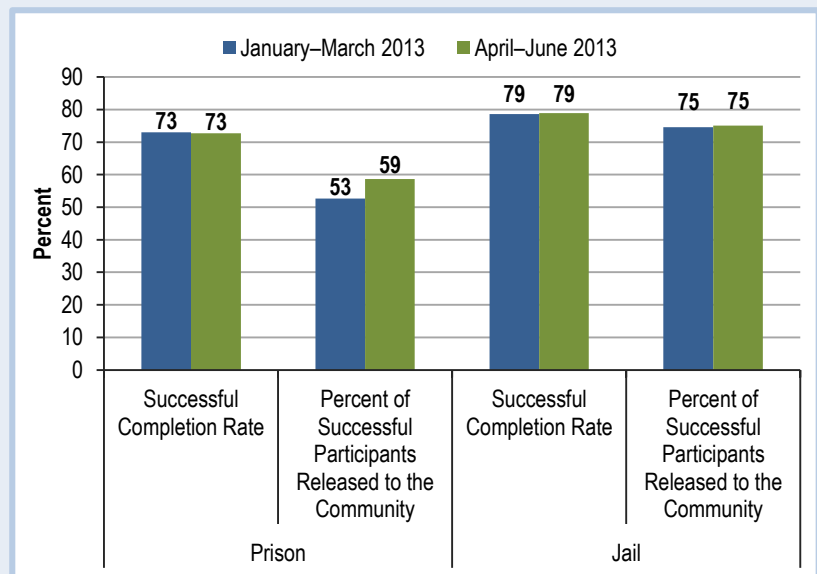

Figure 1. Total Enrolled and Newly Enrolled Participants in Jail- and Prison-Based Programs

The total number of participants enrolled in prison-based programs during the two quarters increased slightly, while those enrolled in jail-based programs decreased slightly. The number of new participants in each type of program was consistent in both quarters. Overall, over 14,000 individuals were enrolled in jail-based or prison-based programs during both quarters.

Figure 2. Participants Completing the Jail- or Prison- Based Program and Released

Of those participants exiting the program, the percentage who complete all the program requirements is the completion rate. Reasons for leaving the program prior to completion are listed in Table 4. The completion rate calculation can be found in the Key Performance Measures table just before Appendix A. Note that participants who exit prior to program completion because of release, transfer, death, or serious injury are excluded from the completion rate calculation. The completion rate is about 73 percent on average for prison-based programs and 79 percent for jail-based programs. Of those who successfully complete prison-based programs during the reporting period, over half are released to the community. Among successful participants in jail-based programs, about 75 percent are released to the community.

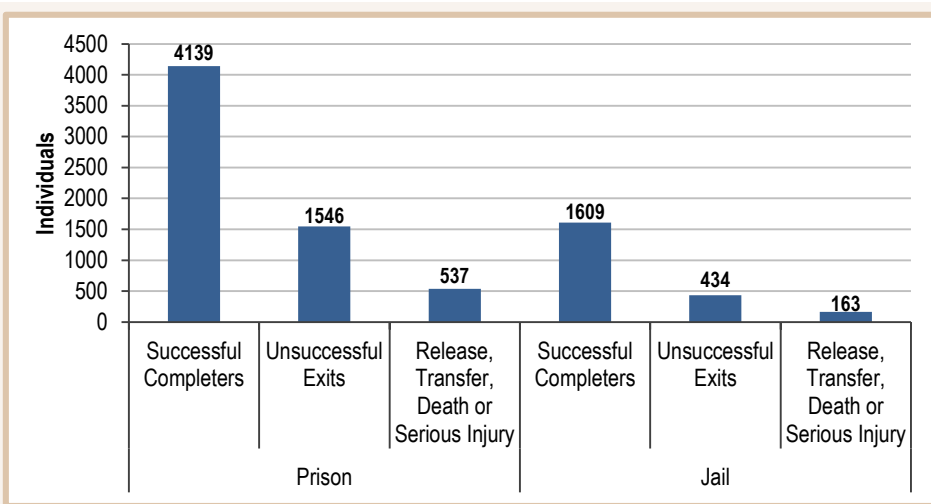

Figure 3. Number of Individuals Completing and Unsuccessfully Exiting the Program

Over 4,100 prison inmates and over 1,600 jail inmates completed all the program requirements during January–June 2013.

Figure 4. Participants in Prison- or Jail-Based Programs with High Criminogenic Risks and Substance Abuse Treatment Needs²

In prison-based programs, 97 percent of program participants who were assessed using a risk and needs assessment instrument exhibited high criminogenic risks and high substance abuse treatment needs. In jail-based programs, the percentage of high-risk/high-need participants increased from 90 percent in January–March 2013 to 94 percent in April–June 2013.

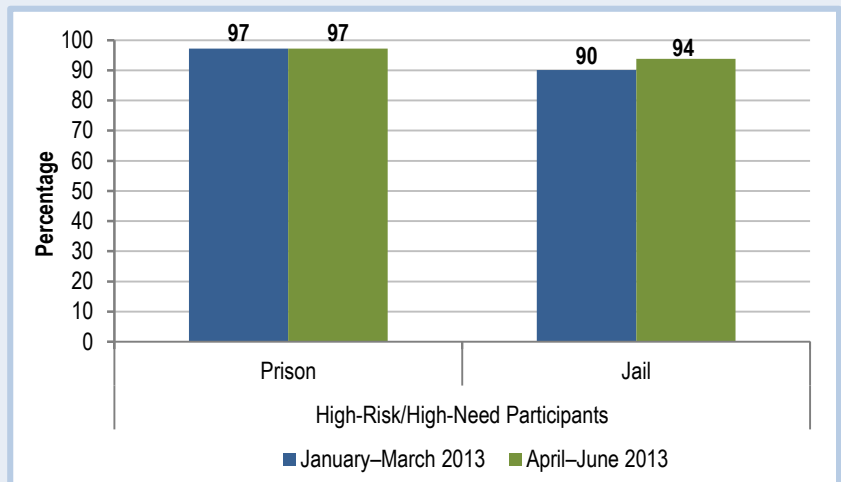

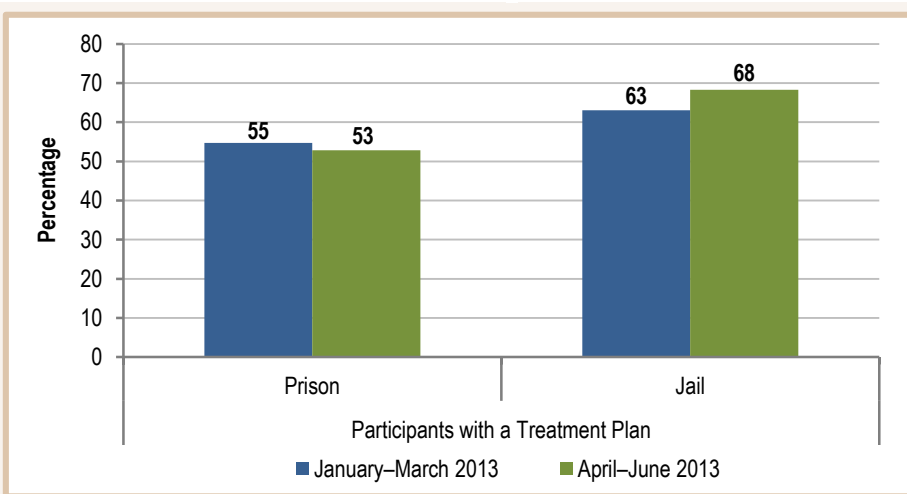

Figure 5. Prison- or Jail-Based Program Participants with Individualized Treatment Plans

About 53 percent to 55 percent of participants in prison-based programs have an individualized substance abuse treatment plan. In jail-based programs, the percentage of participants with individualized treatment plans is higher at 63 percent to 68 percent.

² The PMT questionnaire was recently revised to include a question about the type of risk and needs assessment instruments grantees are using in their programs. Future reports will include that contextual information.

Figure 6. Services Received by Jail- or Prison-Based Program Participants Through BJA Grant Funds: January–June 2013

These bar graphs show the percentage of program participants receiving various services. Generally, participants receive more than one type of service while in the program, and all will receive substance abuse treatments services while participating in the program, although this may happen across different reporting period. During January–June 2013, about 81 percent of prison-based participants and 71 percent of jail-based participants received substance abuse treatment services. About 80 percent of prison-based program participants and 65 percent of jail-based program participants also received cognitive and behavioral services. Cognitive and behavioral services include interventions that address criminal thinking and antisocial behaviors.

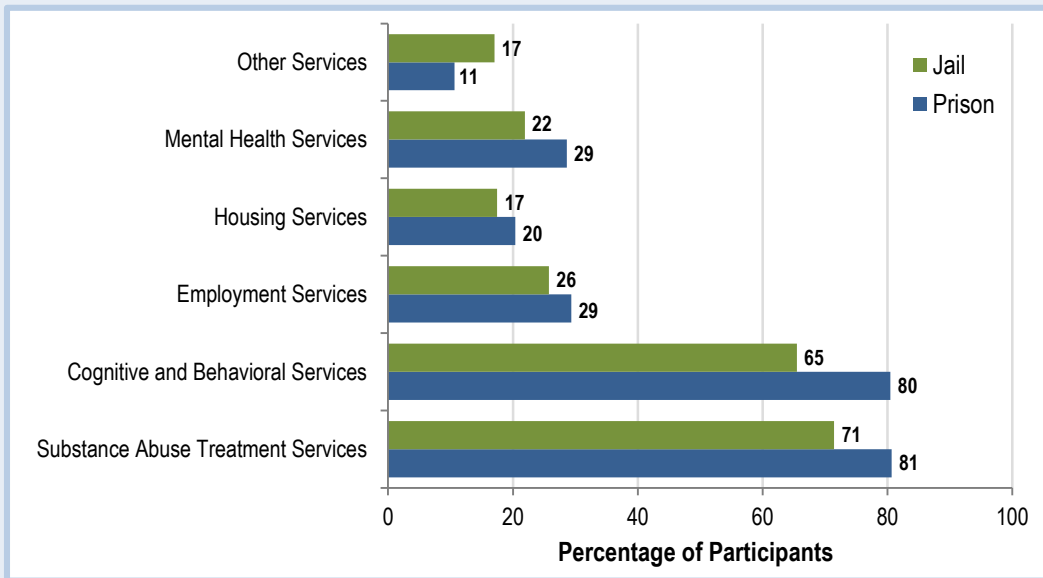

Table 3 shows the number of participants in prison-based and jail-based programs tested for alcohol and illegal substances while enrolled in the program. A positive alcohol/drug test indicates use of alcohol and/or illegal substances.

Table 3. Alcohol and Illegal Substance Testing in Prison- and Jail-Based Programs: January–June 2013

Program Type	January–March 2013		April–June 2013	
	Prison	Jail	Prison	Jail
Number of Participants with Positive Test (N)	134	95	214	75
Number of Participants Tested (N)	3,920	1,528	3,894	1,141
Participants Testing Positive (%)	3	6	5	7

- Over 5,000 jail- and prison-based program participants were tested for illegal substance use each quarter. The percentage of positive tests ranges from 3 percent to 7 percent.
- The low level of substance use is expected, given that this population is incarcerated in jails or prisons and the availability of alcohol and illegal substances is restricted, although available through illicit means.

Table 4. Completion Timeframes and Reasons for Not Completing Jail- or Prison-Based Programs: January–June 2013

	Jail-Based Programs		Prison-Based Programs	
Participants Who Completed Program: Timeframe				
0 to 3 Months	725	45%	487	12%
4 to 6 Months	706	44	1679	41
7 to 9 Months	149	9	1492	36
10 or More Months	29	2	481	12
Total	1,609	100%	4,139	100%
Participants Who Did Not Complete Program: Timeframe				
0 to 3 Months	516	86%	1015	49%
4 to 6 Months	74	12	806	39
7 to 9 Months	4	1	197	9
10 or More Months	3	1	65	3
Total	597	100%	2,083	100%
Participants Who Did Not Complete Program: Reasons Reported				
Termination for a New Charge	49	8%	46	2%
Release or Transfer to Another Facility	151	25	495	24
Death or Serious Illness	12	2	42	2
Voluntary Dropout	77	13	189	9
Failure to Meet Program Requirements	114	19	680	33
Violation of Institutional Rules	166	28	515	25
Other	28	5	116	6
Total	597	100%	2,083	100%

As previously reported, about 66 percent of prison-based program participants and 73 percent of jail-based program participants successfully completed the program in January–June 2013. Table 4 shows the timeframes during which jail- and prison-based program participants exited the program (both successfully and unsuccessfully). It also shows the reasons why participants exited unsuccessfully.

- For **prison-based** programs, 77 percent of participants who completed the program did so in 4 to 9 months. Generally, prison-based participation should be limited to inmates with 6 to 12 months remaining in their confinement. This is so they can be released from incarceration instead of being returned to the general prison population following program completion. The data are consistent with that model.
- For **jail-based** programs, 89 percent of participants who completed the program did so in the first 6 months. Jail-based programs require at least 3 months of treatment programming.
- Of those participants who did not complete the **prison-based** program, 49 percent exited in the first 3 months, compared with 86 percent of those in the jail-based program. The difference is to be expected, because jail-based participants generally have shorter sentences and terms of release.
- For **prison-based programs**, the most common reasons given for participants exiting the program without completing all the requirements include failure to meet program requirements (33 percent), followed by a violation of institutional rules (25 percent) and release or transfer to another facility (24 percent).
- For **jail-based programs**, the most common reasons given for participants exiting the program without completing all the requirements are violation of institutional rules (28 percent), followed by release or transfer to another facility (25 percent) and failure to meet program requirements (19 percent).

The differences between the jail-based and prison-based RSAT programs are worth noting. Many can be attributed to the difference between jail and prisons, such as average length of stay and severity of offense.

The findings are based on only two quarters of data for a subset of jail- and prison-based programs using BJA funds which may not be generalizable to all prison- and jail-based RSAT programs.

Participant-Level Key Measures for Aftercare Programs

The funding authorization allows for creating and maintaining community-based aftercare services for offenders: “States may use up to 10 percent of their total RSAT award for treatment of parolees for up to 1 year after they have been released from a correctional facility.”³ Aftercare services involve the coordination between correctional treatment programs and other social service and rehabilitation programs, such as education and job training, parole supervision, halfway houses, self-help, and peer-group programs.

In January–June 2013, 58 subrecipients in 10 States and Territories (i.e., correctional facilities) have operational aftercare programs. This section represents those programs that were using BJA RSAT funds during January–June 2013 and may not be representative of all aftercare programs (see Figures 7–11 and Tables 5 and 6).

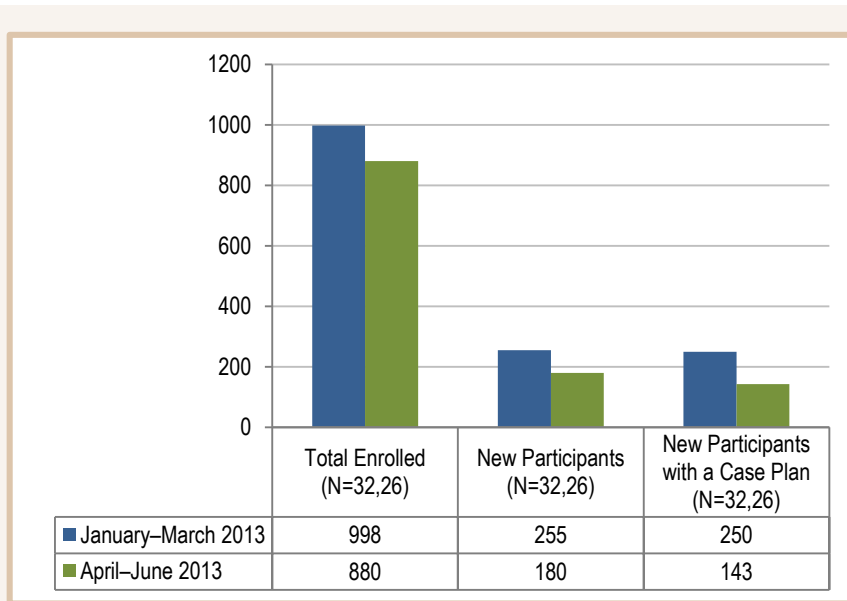

Figure 7. Enrolled Aftercare Program Participants and New Participants with a Case Plan

The number of individuals enrolled in aftercare programs decreased in April–June 2013, as did the number of new participants enrolled in that quarter compared with January–March 2013. The decrease is partially attributable to a drop in the total number of active aftercare programs reporting during April–June 2013. The number of new participants with a case plan tracks closely with total number of new participants. The next set of bar graphs in Figure 7 displays the percentage of new participants enrolled in aftercare programs with an individualized case plan.

³ Bureau of Justice Assistance. (2005). *Program update: Residential Substance Abuse Treatment for State Prisoners (RSAT) program* (Publication No. NCJ 206269). Washington, DC: Author.

Figure 8. New Aftercare Program Participants with a Case Plan (%), and High-Risk/High-Need Participants⁴

This graph shows the percentage of new aftercare program participants with a case plan, and the percentage of participants with high substance abuse treatment needs and who have high criminogenic risk factors as determined by a risk/needs assessment. The percentage of new participants with a case plan was 98 percent in January–March 2013 and 79 percent in April–June 2013.

The percentage of high-risk/high-need participants ranged from 92 percent to 97 percent. BJA has begun collecting data on the assessment instruments used by grantees. Subsequent analysis will help determine the most common risk/needs assessment instruments used by aftercare programs.

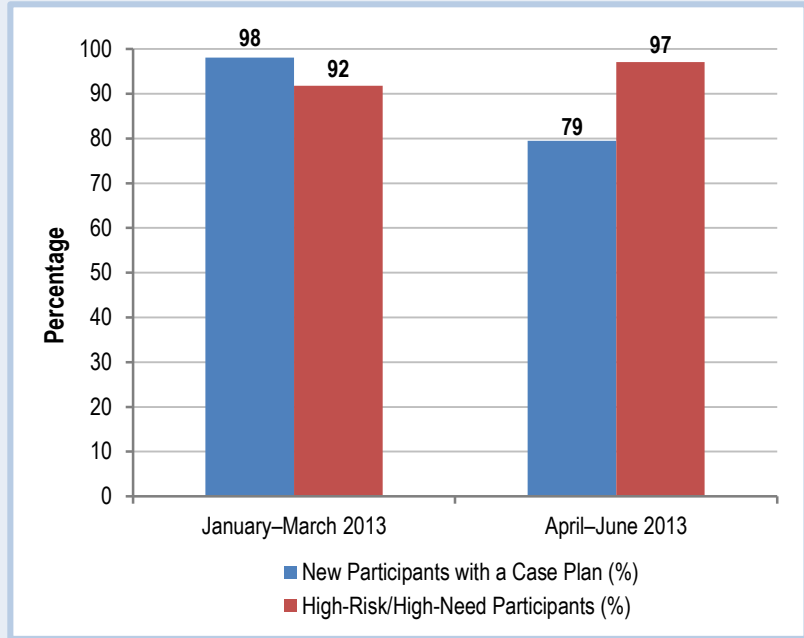

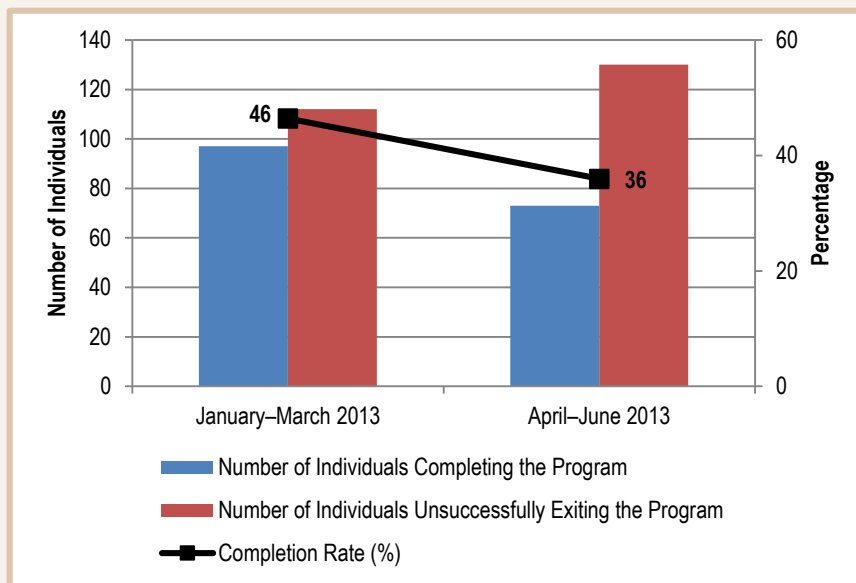

Figure 9. Participants Successfully Completing the Aftercare Program or Exiting the Program, and Completion Rate (%)

These bar graphs show the number of participants exiting the aftercare program, those exiting the program successfully by completing all program requirements, and the completion rate. Reasons for leaving the program prior to completion are listed in Table 6. The completion rate calculation can be found in the Key Performance Measures table just before Appendix A. As mentioned previously, participants who exit prior to program completion because of release, transfer, death, or serious injury are excluded from the completion rate calculation. The completion rate decreased from 46 percent in January–March 2013 to 36 percent in April–June 2013. Past iterations of RSAT Program Performance Report showed aftercare completion rates ranging from 53 percent to 60 percent.⁵

⁴ The PMT questionnaire was recently revised to include a question about the type of risk and needs assessment instruments grantees are using in their programs. Subsequent iterations of this report will include that contextual information.

⁵ Steyer, J. (2012). *Program performance report: Residential substance abuse treatment program*. Washington, DC: U.S. Department of Justice, Office of Justice Programs, Bureau of Justice Assistance. Available online: www.bja.gov/Publications/RSAT_PPR_09-12.pdf.

Figure 10. Number of Individuals Successfully Completing the Program, and Unsuccessful Exits

During January–June 2013, more people were terminated from the program than successfully completed all of the program requirements. “Terminated” is defined as exiting the program because of a new charge, voluntarily dropping out (if not on parole or court supervision), a failure to meet program requirements, or absconding.

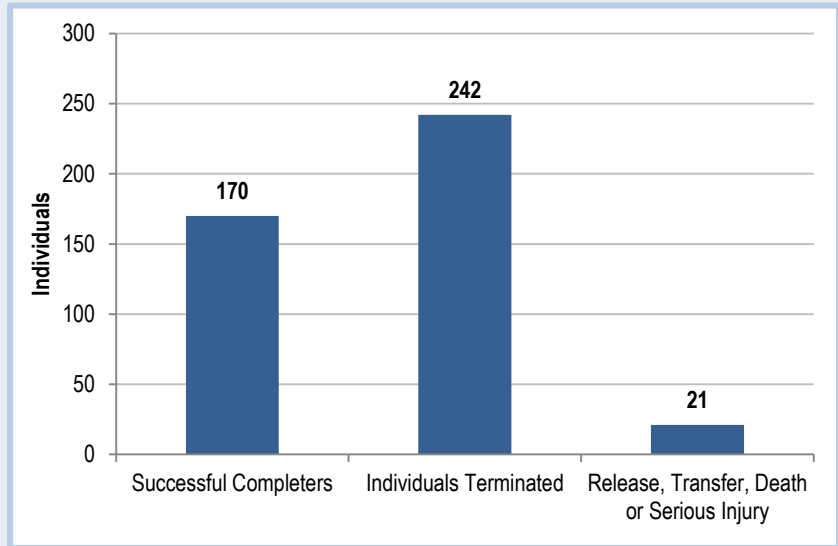

Figure 11. Services Received by Aftercare Program Participants Through BJA Grant Funds: January–June 2013

Similarly to services for jail- and prison-based program participants reported in Figure 6, these bar graphs show the percentage of aftercare program participants receiving various services. Generally, participants receive more than one type of service while in the program, and all will receive substance abuse treatment services while participating. Overall, about 64 percent of aftercare participants received substance abuse treatment services during both reporting periods. About 60 percent of participants also received cognitive and behavioral services. Cognitive and behavioral services include interventions that address criminal thinking and antisocial behaviors. Finally, about 20 percent of participants received employment services during the reporting periods examined.

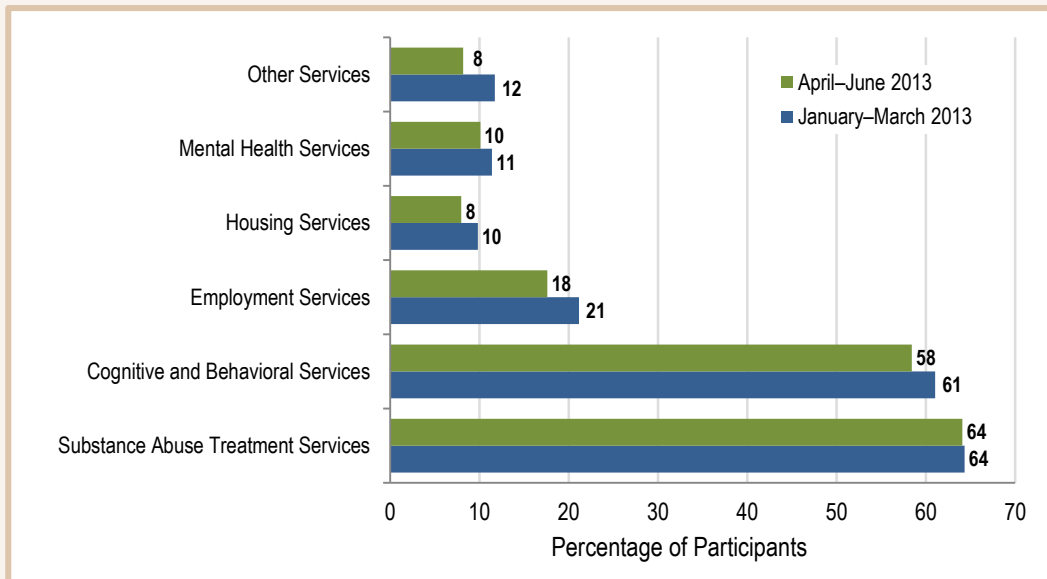

Table 5 shows the number of aftercare program participants tested for alcohol and illegal substances, and of those, the number who tested positive for illegal substance use.

Table 5. Alcohol and Illegal Substance Testing in Aftercare Programs: January–June 2013

	January–March 2013	April–June 2013
Number of Participants with Positive Test (N)	65	50
Number of Participants Tested (N)	318	531
Participants Testing Positive (%)	20	9

- In January–March 2013, about 20 percent of drug tests were positive, indicating substance abuse usage while participating in the aftercare program. However, in April–June 2013, grantees reportedly conducted more tests (531 versus 318), which yielded fewer positive tests.
- The percentage of positive drug/alcohol tests dropped from 20 percent in January–March 2013 to 9 percent in April–June 2013.
- Previous analysis of PMT RSAT aftercare data resulted in a positive drug testing rate of about 21 percent.⁶

Table 6. Completion Timeframes and Reasons for Not Completing Aftercare Programs: January–June 2013

	<i>N</i>	%
Participants Who Completed Program: Timeframe		
0 to 3 Months	61	36%
4 to 6 Months	75	44
7 to 9 Months	18	11
10 or More Months	16	9
Total	170	100%
Participants Who Did Not Complete Program: Timeframe		
0 to 3 Months	172	65%
4 to 6 Months	57	22
7 to 9 Months	13	5
10 or More Months	21	8
Total	263	100%
Participants Who Did Not Complete Program: Reasons Reported		
Termination for a New Charge	47	18%
Release or Transfer to Another Facility	20	8
Death or Serious Illness	1	0
Voluntary Dropout	59	22
Failure to Meet Program Requirements	106	40
Absconded	16	6
Other	14	5
Total	263	100%

As previously reported, the successful completion rate ranges from 36 percent to 60 percent. Table 6 shows the timeframes during which aftercare participants exited the program (both successfully and unsuccessfully) in January–June 2013. It also shows the reasons that participants exited the program unsuccessfully.

- About 44 percent of participants successfully exited the program during the 4- to 6-month timeframe.
- For those participants who did not complete the program in January–June 2013, 65 percent left the program in the first 3 months.
- The most common reasons cited for not completing the aftercare program include failure to meet program requirements (40 percent), voluntary dropout (22 percent), and termination for a new charge (18 percent).

⁶ Steyee (2012).

Observations

- A total of 5,748 jail- and prison-based RSAT program participants and 170 aftercare participants successfully completed the program during the 6 months covered in this report.
- The time to completion for the majority of participants was no more than 9 months for jail-, prison-based, and aftercare programs. However, some differences were observed between jail- and prison-based RSAT programs. The time to completion for 89 percent of jail-based program participants was up to 6 months. The average time to completion for prison-based programs was longer, as expected. For prison-based program participants, 88 percent completed in up to 9 months.
- Of those who quit the program early, 86 percent of jail-based program participants did so in the first 3 months, compared with 49 percent of prison-based program participants and 65 percent of aftercare program participants.
- Over 90 percent of individuals who were assessed exhibited high criminogenic risk and substance abuse treatment needs in all program types.
- Other than substance abuse treatment, the most common types of services provided were cognitive and behavioral treatment services.

Key Performance Measures

Measure	Data Elements Used to Calculate Measure	Definition	Interpretation
Participants with High Criminogenic Risk and Substance Abuse Treatment Needs Jail/Prison and Aftercare	A. Number of participants assessed as having high criminogenic risks and needs B. Number of participants assessed using a risk assessment instrument % High risk = A/B	Percentage of participants identified using a valid screening/assessment instrument as having high criminogenic risks and needs.	Assess the percentage of drug court participants who have high criminogenic risks and needs; participants with high criminogenic risks and needs are at higher risk for reoffending compared with low- and medium-risk individuals.
Successful Completion Rate Jail/Prison and Aftercare	A. Number of participants successfully completing program requirements B. Number of participants terminated for a new charge C. Number of participants who dropped out D. Number of participants who did not complete due to failure to meet program requirements E. Number of participants who did not complete for violating institutional rules F. Number who failed for other reasons % Successful = A/(A+B+C+D+E+F)	Number of participants who successfully completed the program.	Assesses how many participants have successfully completed program requirements as determined by the drug court program; can also be thought of as the graduation rate.
Participants Testing Positive for Using Illegal Substances Jail/Prison and Aftercare	A. Number of participants who tested positive for drug or alcohol use B. Number of participants tested % Positive Drug or Alcohol Test = A/B	Percentage of participants who have failed drug and alcohol tests while in the program.	Assesses how many participants continue to use substances while in the program; also assesses the use of drug and alcohol testing as a key component of the program.
New Participants with an Individualized Treatment Plan (Case Plan) Jail/Prison and Aftercare	A. Number of new participants with a case plan B. Number of new participants % Case Plan = A/B	Percent of participants who receive an individualized treatment plan upon entering the program.	Assesses the percentage of new participants entering the program who are receiving individually tailored treatment plans.
Successful Program Completers Released from Jail/Prison Entering the Community Jail/Prison Only	A. Number of participants successfully completing program requirements and released from incarceration B. Number of participants successfully completing program requirements % Case Plan = A/B	Percent of participants completing all program requirements and released from incarceration.	Assesses the percentage of successful program participants released from incarceration into their communities.

Appendix A. Data from Prison-Based Program Grantees and Subrecipients: January–June 2013

This table presents the key measures for individual grantees and subrecipients.

Organization	State	Federal Award Number	Award Amount (\$)	Reporting Period	Subrecipient	Total Enrolled (N)	New Admission (N)	High-Risk Participants (%)	Participants Testing Positive (%)	Successful Completion (%)	Case Plan (%)	Released to Community (%)
