June 23, 2014

BJA FY 2013 Justice Information Sharing Solutions
Implementation Program—Pilot Site Briefing:

Justice Information Sharing Solutions Implementation Program Kentucky State Police

- **Business Problem(s) Targeted:**
 - Attempts are being made to serve warrants, but unknown to the serving agency the targeted subject is incarcerated in a local jail or state facility.
 - Individuals that are placed on parole may have warrants issued or be re-arrested without their parole officer being aware of such actions.
 - Currently there is not a unified location for criminal investigators to view statewide warrant, police report, and incarceration data.
- **Global Solutions Implemented/to Be Implemented and for What Specific Purpose(s):**
 - Every new warrant issued will automatically generate a web service request to the national offender network JusticeXChange and display incarnation data back to E-Warrants.
 - JusticeXChange booking records, eWarrant warrant records and KyOPS citation arrest records will be integrated to allow alerts to be transmitted to Kentucky Department of Corrections parole officers when someone under their supervision is arrested on a new charge or has a new warrant issued.
 - The KyOPS Web Portal will be modified to include a master name search which will spawn off a query to eWarrants and JusticeXChange giving investigators one unified place to view statewide warrant, police report and incarceration data.
- **Reusability Factors (i.e., specific business problems, considerations, factors, or environments to be considered if project efforts are planned for reuse or replication):**
 - Project efforts will most effectively be reused in states looking to integrate incarceration and booking data into applications using NIEM standards.
 - Project efforts will most effectively be reused in state looking to utilize booking, citation and warrant records for the purpose of sending alerts.
- **“Asks” of BJA/Global (i.e., other than funding, what additional solutions or support would facilitate successful resolution of the project’s business problem[s]?):**

- Obtain Springboard certification on Global Warrant Specification.
- **Data-Driven or Evidence-Based Practices or Evaluation Methods Used/Planned for Use:**
 - Number of persons in jail at the time of warrant issue.
 - Number of re-arrests related to KY parolees.
 - Number of searches performed via KyOPS for jail and warrant data
- **Benefits and Outcomes (realized or anticipated, depending on project maturity):**
 - Increase the frequency and timeliness of warrants served on current incarcerated offenders.
 - Identify parolee behavior that might result in revocation of parole.
 - Improve criminal investigation by increasing the number of data sources available to the KyOPS user community.
- **Lessons Learned and Challenges to Implementation (as part of the final findings or feedback to date, depending on project maturity):**
 - Managing project scope.
- **Project Points of Contact:**
